

Hello everyone!

Just completed module 3 of the DIGITAL WORKPLACE program, we propose in this forum the following articles, so that you can go deeper into everything we have worked on. Read them carefully and then, individually:

- Point out which aspects have caught your attention most especially.
- How do you think you work as a team?
- What would you highlight especially about strengths of positivity and productivity? What is your main contribution in a team in each case?
- Given the teaching material and this forum, where do you think you could start working to improve your skills working on remote computers?
- What digital tools and applications do you find interesting to help work on remote computers?
- Share some personal experience or learning that you think can help your fellows.
- If you know any video and / or article on this topic, share it!

We look forward to your contributions!
