

Hello everyone!

Just completed module 4 of the DIGITAL WORKPLACE program, we propose in this forum the following articles, so that you can go deeper into everything we have worked on. Read them carefully and then, individually:

- Point out which aspects have caught your attention most especially.
- What aspect of teleworking is the biggest innovation for you?
- How has the way you worked changed? What technological tools and platforms do you use?
- What new concepts have you learned? What new resources or ways of working can you incorporate into your daily life?
- Taking into account the didactic material and this forum, in what concrete things do you think you should work to improve your change management and creative thinking in the field of teleworking? What other aspects do you consider that you already know or have controlled?
- Share some personal experience or learning that you think can help your fellows.
- If you know any video and / or article on this topic, share it!

We look forward to your contributions!
